TEST REPORT

Applicant:	SHENZHEN WLINK TECHNOLOGY CO., LIMITED
Address of Applicant:	319,YiBen Electronic Business Building, NO.1063 ChaGuang Road, XiLi, NanShan District, ShenZhen, China
Manufacturer/ Factory:	SHENZHEN WLINK TECHNOLOGY CO., LIMITED
Address of Manufacturer/ Factory:	319,YiBen Electronic Business Building, NO.1063 ChaGuang Road, XiLi, NanShan District, ShenZhen, China
Equipment Under Test (E	EUT)
Product Name:	Industrial 3G/4G Cellular Router
Model No.:	WL-G500
Applicable standards:	EN 55032:2015 EN 55024:2010/A1:2015 EN 61000-3-2:2014 EN 61000-3-3:2013
Date of sample receipt:	May 27, 2017
Date of Test:	May 27-June 23, 2017
Date of report issued:	June 28, 2017
Test Result :	PASS *

In the configuration tested, the EUT complied with the standards specified above.

The CE mark as shown below can be used, under the responsibility of the manufacturer, after completion of an EC Declaration of Conformity and compliance with all relevant EC Directives. The protection requirements with respect to electromagnetic compatibility contained in Directive 2014/30/EU are considered.

Robinson Lo Laboratory Manager

4 Test Summary

Test item	Test Requirement	Test Method	Class / Severity	Result
Radiated Emission	EN 55032	EN 55032	Class B	Pass
Conducted Emission	EN 55032	EN 55032	Class B	Pass
Harmonic Emission	EN 61000-3-2	EN 61000-3-2	N/A	N/A
Flicker Emission	EN 61000-3-3	EN 61000-3-3	Clause 5	Pass
Electrostatic discharge	EN 55024	EN 61000-4-2	Contact ±2,±4 kV Air ±2,±4,±8 kV	Pass
Radio-frequency electromagnetic field Amplitude modulated	EN 55024	EN 61000-4-3	3V/m 80%, 1kHz, AM	Pass
Electrical fast transients	EN 55024	EN 61000-4-4	$AC \pm 1.0 kV$	Pass
Surges	EN 55024	EN 61000-4-5	±1kV D.M ±2kV C.M	Pass
Radio-frequency continuous conducted	EN 55024	EN 61000-4-6	3Vrms (emf), 80%, 1kHz Amp. Mod.	Pass
Voltage dips and Voltage interruptions	EN 55024	EN 61000-4-11	$0 \% U_T^*$ for 0.5per 0 % U_T^* for 250per 70 % U_T^* for 25per	Pass

Remark:

1. Pass: Comply with the essential requirements in the standard.

2. N/A: not applicable

3. U_T : the nominal supply voltage; D.M: Differential Mode; C.M: Common Mode.

5 General Information

5.1 General Description of EUT

Product Name:	Industrial 3G/4G Cellular Router
Model No.: WL-G500	
Power Supply:	Adapter Model:RD1201500-C55-1OG INPUT: AC 100-240V,50/60Hz,0.6A Max OUTPUT: DC 12V1.5A

5.2 Test mode and Test voltage

Test mode:

LAN mode	Keep the EUT in Ping ID status by lan port.
Test voltage:	
AC 230V/50Hz	

5.3 Description of Support Units

Manufacturer	Description	Model	Serial Number
Apple	PC	A1278	C1MN99ERDTY3
DELL	KEYBOARD	SK-8115	N/A
DELL	MOUSE	MOC5UO	N/A

5.4 Deviation from Standards

None.

5.5 Abnormalities from Standard Conditions

None.

5.6 Monitoring of EUT for All Immunity Test

Visual:	Monitor the screen.

Audio: Monitor the sound.

5.7 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

• FCC — Registration No.: 600491

Global United Technology Services Co., Ltd., Shenzhen EMC Laboratory has been registered and fuly described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in files. Registration 600491, June 22, 2016

• Industry Canada (IC) — Registration No.: 9079A-2

The 3m Semi-anechoic chamber of Global United Technology Services Co., Ltd. Has been

Registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 9079A-2, August 15, 2016.

5.8 Test Location

RI test was performed at:	
---------------------------	--

SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen Branch E&E Lab,

No. 1 Workshop, M-10, Middle Section, Science & Technology Park, Shenzhen, Guangdong, China. 518057.

All other tests were performed at:

Global United Technology Services Co., Ltd.

Address: No. 301-309, 3/F., Jinyuan Business Building, No.2, Laodong Industrial Zone, Xixiang Road, Baoan District, Shenzhen, Guangdong, China 518102 Tel: 0755-27798480

		AE EUT Ground Reference Plane Test Receiver						

Test Procedure:	From 30MHz to 1GHz:					
rest riocedule.	 The radiated emissions test was conducted in a semi-anechoic chamber. 					
	2. The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane, but separated from metallic contact with the ground reference plane by 0.1m of insulation.					
	Before final measurements of radiated emissions, a pre-scan was performed in the spectrum mode with the peak detector to find out the maximum emissions spectrum plots of the EUT.					
	4. The frequencies of maximum emission were determined in the final radiated emissions measurement. At each frequency, the EUT was rotated 360°, and the antenna was raised and lowered from 1 to 4 meters in order to determine the maximum disturbance. Measurements were performed for both horizontal and vertical antenna polarization.					
	Above 1GHz:					
	1. The radiated emissions test was conducted in a fully-anechoic chamber.					
	2. The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane, but separated from metallic contact with the ground reference plane by 0.1m of insulation.					
	3. Before final measurements of radiated emissions, a pre-scan was performed in the spectrum mode with the peak detector to find out the maximum emission spectrum plots of the EUT.					
	4. The frequencies of maximum emission were determined in the final radiated emissions measurement. At each frequency, the EUT was rotated 360°, and the antenna was raised and lowered from 1 to 4 meters in order to determine the maximum disturbance. Measurements were performed for both horizontal and vertical antenna polarization.					
Test environment:	Temp.: 25 °C Humid.: 52% Press.: 1 012mbar					
Measurement Record:	Uncertainty: ± 4.50dB					
Test Instruments:	Refer to section 6.0 for details					
Test mode:	Refer to section 5.2 for details.					
Test results:	Pass

Report No.: GTS201705000233E05

Notes:

- 1. An initial pre-scan was performed on the live and neutral lines with peak detector.
- 2. Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission.
- 3. Final Level =Receiver Read level + LISN Factor + Cable Loss
- 4. If the average limit is met when using a quasi-peak detector receiver, the EUT shall be deemed to meet both limits and measurement with the average detector receiver is unnecessary.

7.3 Asymmetric mode conducted emissions

Measurement Data

7.4 Harmonic Emission

Test Requirement:	EN 61000-3-2
Test Method:	N/A: See Remark Below
Remark	There is no need for Harmonics test to be performed on this product (rated power is less than 75W) in accordance with EN 61000-3-2.
	For further details, please refer to Clause 7, Note 1 of EN 61000-3-2 which states:
	"For the following categories of equipment limits are not specified in this edition of the standard.
	Note 1: Equipment with a rated power of 75W or less, other than lighting equipment."

7.5 Flicker Emission

Test Requirement:	EN 6100	EN 61000-3-3					
Test Method:	EN 6100	EN 61000-3-3					
Class/Severity:	Clause 5	5 of EN 610)00-3-3				
Measurement Time:	10 min	10 min					
Detector:	As per E	N 61000-3	-3				
Test environment:	Temp.:	Temp.: 24 °C Humid.: 51% Press.: 1 012mbar					
Test Instruments:	Refer to	Refer to section 6 for details					
Test mode:	Refer to	Refer to section 5.2 for details					
Test results:	Pass

8 Immunity Test Results

8.1 Performance Criteria Description in Clause 7 of EN 55024

Criterion A:	The equipment shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.
Criterion B:	After the test, the equipment shall continue to operate as intended without operator intervention. No degradation of performance or loss of function is allowed, after the application of the phenomena below a performance level specified by the manufacturer, when the equipment is used as intended. The performance level may be replaced by a permissible loss of performance.
	During the test, degradation of performance is allowed. However, no change of operating state or stored data is allowed to persist after the test.
	If the minimum performance level (or the permissible performance loss) is not specified by the manufacturer, then either of these may be derived from the product description and documentation, and by what the user may reasonably expect from the equipment if used as intended.
Criterion C:	Loss of function is allowed, provided the function is self-recoverable, or can be restored by the operation of the controls by the user in accordance with the manufacturer's instructions.
	Functions, and/or information stored in non-volatile memory, or protected by a battery backup, shall not be lost.

8.2 Electrostatic discharge

0.2						
	Test Requirement:	EN 55024				
	Test Method:	EN 61000-4-2				
	Discharge Voltage:	Contact Discharge: ±4kV				
		Air Discharge: ±2kV, ±4kV, ±8kV				
		HCP/VCP: ±4kV				
	Polarity:	Positive & Negative				
	Number of Discharge:	Contact Discharge: Minimum 25 times at each test point,				
		Air Discharge: Minimum 10 times at each test point.				
	Discharge Mode:	Single Discharge				
	Discharge Period:	1 second minimum				
	Performance Criterion:	Criterion B				
	Test setup:	Electrostatic Discharge EUT VCP(0.5m°0.5m) 470K ohm HCP(1.5m°0.8m) 470K ohm HCP(1.5m°0.8m) 470K ohm Ground Reference Plane				
	Test Procedure:	1. Air discharge: The test was applied on non-conductive surfaces of EUT. The round discharge tip of the discharge electrode was approached as fast as possible to touch the EUT. After each discharge, the discharge electrode was removed from the EUT. The generator was re-triggered for a new single discharge and repeated 10 times for each pre-selected test point. This procedure was repeated until all the air discharge completed				
		2. Contact Discharge:				
		The test was applied on conductive surfaces of EUT. the generator was re-triggered for a new single discharge and repeated 25 times for each pre-selected test point. the tip of the discharge electrode was touch the EUT before the discharge switch was operated.				
		3. Indirect discharge for horizontal coupling plane				
		At least 10 single discharges shall be applied at the front edge of each HCP opposite the centre point of each unit of the EUT and 0.1m from the front of the EUT. The long axis of the discharge electrode shall be in the plane of the HCP and perpendicular to its front edge during the discharge.				
		Consideration should be given to exposing all sides of the EUT.				
		4. Indirect discharge for vertical coupling plane				
		At least 10 single discharges were applied to the center of one vertical edge of the coupling plane. The coupling plane, of dimensions 0.5m X				

Report No.: GTS201705000233E05 0.5m, was placed parallel to, and positioned at a distance of 0.1m from the EUT. Discharges were applied to the coupling plane, with this plane in sufficient different positions that the four faces of the EUT are completely illuminated. 51% Test environment: Temp.: 24 °C Humid.: Press.: 1 012mbar Test mode: Refer to section 6.0 for details Refer to section 5.2 for details Test Instruments: Test results: Pass

Remark:

A: Normal performance within the specification limits.

B:During test it may loss some function, after test it can be normal.

8.3 Radio-frequency electromagnetic field Amplitude modulated

	a Radio-frequency electromagnetic field Amplitude modulated					
Test Requirement:	EN 55024					
Test Method:	EN 61000-4-3					
Frequency range:	80MHz to 1GHz					
Test Level:	3V/m					
Modulation:	80%, 1kHz Amplitude Modulation					
Performance Criterion:	Criterion A					
Test setup:	Camera Camera Camera Antenna Tower AE EUT (Turntable) Ground Reference Plane Generator Power Amplifier					
Test Procedure:	 For table-top equipment, the EUT was placed in the chamber on a non-conductive table 0.8m high. For arrangement of floor-standing equipment, the EUT was mounted on a non-conductive support 0.1m above the supporting plane. For human body-mounted equipment, the EUT may be tested in the same manner as table top items. If possible, a minimum of 1 m of cable is exposed to the electromagnetic field. Excess length of cables interconnecting units of the EUT shall be bundled low-inductively in the approximate center of the cable to form a bundle 30 cm to 40 cm in length. The EUT was initially placed with one face coincident with the calibration plane. The EUT face being illuminated was contained within the UFA (Uniform Field Area). The frequency ranges to be considered were swept with the signal modulated and pausing to adjust the RF signal level or to switch oscillators and antennas as necessary.Where the frequency range was swept incrementally, the step size was not exceed 1 % of the preceding frequency value. The dwell time of the amplitude modulated carrier at each frequency was not be less than the time necessary for the EUT to be exercised and to respond, and was not less than 0,5 s. The test normally was performed with the generating antenna facing each side of the EUT. The polarization of the field generated by each antenna necessitates testing each selected side twice, once with the antenna positioned vertically and again with the antenna positioned horizontally. 					

Report No.: GTS201705000233E05						
	8. The EUT was performed in a configuration to actual installation conditions, a video camera and/or a audio monitor were used to monitor the performance of the EUT.					
Test environment:	Temp.: 25 °C Humid.: 52% Press.: 1 012mbar				1 012mbar
